

# Tip: Use View Tools during Element Placement

Did you know that you can use tools from the *View Control Toolbox* while in the middle of an element placement tool, such as Place Smartline, without losing your spot?

Here's how to do it:

1. While in the **Place Smartline** tool you need to window in on an area to snap to the proper element.
2. Select the **Window Area** tool (or other appropriate view tool) to window in on the desired area. Do not hit reset – yet.
3. After windowing in click the **Reset** button on your mouse. The Place Smartline tool will resume from where you left off.
