

# MicroStation Update 15

## Element Templates missing from list

It appears that there is a bug in MicroStation update 15, both versions v10.15.00.74 and v10.15.02.11, if Element Templates dgnlibs are configured within the MS\_DGNLIBLIST variable which is the current method of configuration, they do not appear in the Element Templates list. (see first two images) They appear in Explorer but cannot be accessed or used.

The Configuration image below shows the two new variables for Element Templates and Item Types undefined. This is as it would be if running a pre update 15 configurations as most companies would have in place.

# MicroStation Update 15

## Element Templates missing from list

To get MicroStation update 15 to have Element Templates work as designed the new variable **MS\_DGNLIBLIST\_ELEMENTTEMPLATES** must be added to the configuration.

A typical line in the configuration to do this is as follows.

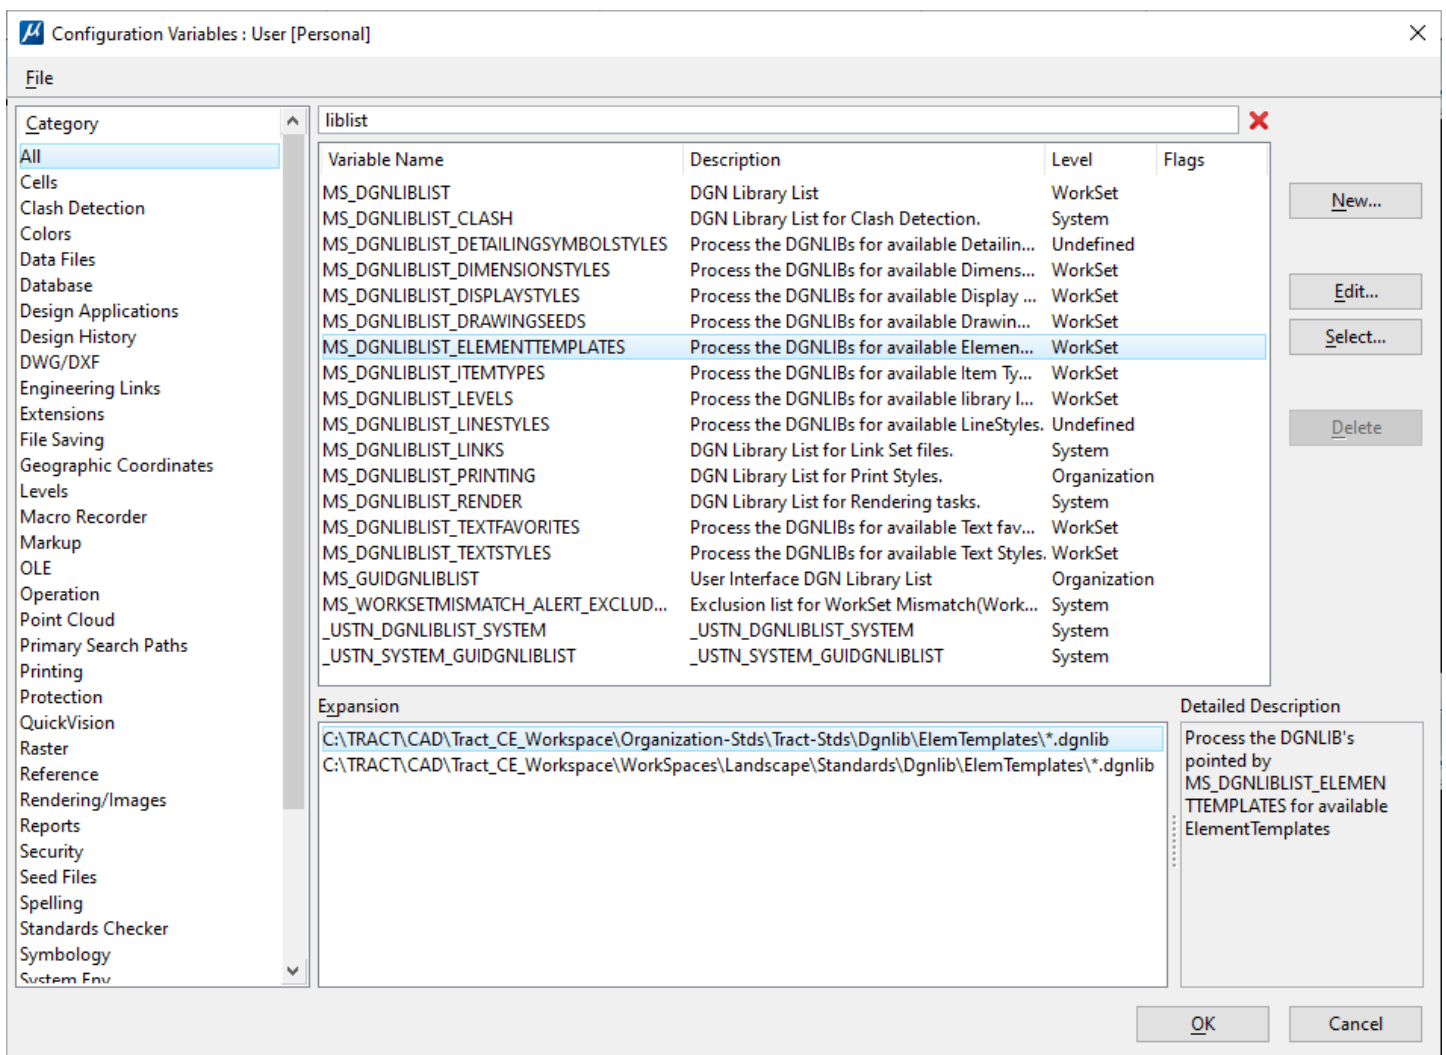

```
MS_DGNLIBLIST_ELEMENTTEMPLATES < $(_USTN_WORKSPACESTANDARDS)Dgnlib/*ElemTemplates.dgnlib
```

or

```
MS_DGNLIBLIST_ELEMENTTEMPLATES < $(_USTN_WORKSPACESTANDARDS)Dgnlib/ElemTemplates/*.dgnlib
```

Once that is added you will see the Element Templates in the list and will work as they did previously.

The image below shows the new configuration with both new variables **MS\_DGNLIBLIST\_ELEMENTTEMPLATES** and **MS\_DGNLIBLIST\_ITEMTYPES** defined.
